

NICHE
DIAGNOSTICS, LLC

OUR PROMISE

Knowing quickly whether or not your immunosuppressed patient is infected with *Histoplasma capsulatum* is important – to you, to your patient and to your patient’s family. The sooner you can rule in or rule out this disease, the sooner you can begin the appropriate treatment and get your patient on the road to recovery.

Niche Diagnostics has the test and services that will get your patient’s results to you rapidly and accurately. Our Histoplasmosis Urinary Antigen Enzyme Immunoassay uses monoclonal antibodies to detect *Histoplasma* antigens in urine samples. The high specificity of the monoclonal antibodies results in greater accuracy due to less cross reactivity.

ABOUT US

Niche Diagnostics is a new biotechnology company managed by a team of experts with years of experience in unique, reagent isolation, assay development and specialty laboratory testing. Our Histoplasmosis Urinary Antigen Enzyme Immunoassay is the first test in a line of fungal tests currently under development and is offered through a fully licensed, clinical laboratory based in Maine.

Our mission is to provide improved test results while also developing new reagents and assays for unmet diagnostic opportunities. Niche Diagnostics' exceptional combination of assay development skills coupled with rapid laboratory testing services offers a unique diagnostic testing opportunity for health care professionals and clinical testing facilities who seek to provide improved disease detection to their clients and patients.
